Deviation from Applicable Standard

The above equipment was tested by WH Technology Corp. for compliance with EMC requirements set forth in the EUROPEAN COUNCIL DIRECTIVE 2014/30/EU and the technical standards mentioned above. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance.

This test report shall not be reproducing in part without written approval of WH Technology Corp.

1.3 TEST METHODOLOGY EUT SYSTEM OPERATION

- 1. The EUT was configured according to EN55032 CLASS A.
- 2. Photos of test configuration please refer to appendix 1.
- 3. Perform the EMC testing procedures, and measure the maximum emission noise.

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

1.4 DESCRIPTION OF THE SUPPORT EQUIPMENTS <u>Setup Diagram</u>

See test photographs attached in appendix 1 for the actual connections between EUT and support equipment.

2. INSTRUMENT AND CALIBRATION

2.1 MEASURING INSTRUMENT CALIBRATION

The measuring equipment utilized to perform the tests documented in the report has been calibrated once a year or in accordance with the manufacturer's recommendations, and is traceable to recognized national standards.

2.2 TEST AND MEASUREMENT EQUIPMENT

The following list contains measurement equipment used for testing. The equipment conforms to the requirement of CISPR 16-1, ANSI C63.2 and. Other required standards.

Calibration of all test and measurement, including any accessories that may effect such calibration, is checked frequently to ensure the accuracy. Adjustments are made and correction factors are applied in accordance with the instructions contained in the respective.

2.3 TEST PERFORMED

Conducted emissions were invested over the frequency range from 0.15 MHz to 30 MHz using a receiver which resolution bandwidth is set at 9 KHz.

Radiated emissions were invested over the frequency range from 30 MHz to 1000 MHz using a receiver which resolution bandwidth is set at 120 KHz. Radiated measurement was performed at distance that from an antenna to EUT is 10 meters.

2.4 APPENDIX

Appendix A: Measurement Procedure for Main Power Port Conducted Emissions

The measurements are performed in a WH lab room; The EUT was placed on non-conductive 1.0 m x 1.5 m table, which is 0.8 meters above an earth-grounded.

Power to the EUT was provided through the LISN which has the Impedance (50 ohm/50 uH) vs. Frequency Characteristic in accordance with the standard. Powers to the LISNs were filtered to eliminate ambient signal interference and these filters were bonded to the ground plane. Peripheral equipment required to provide a functional system (support equipment) for EUT testing was powered from the second LISN through a ganged, metal power outlet box which is bonded to the ground plane at the LISN.

If the EUT is supplied with a flexible power cord, the power cord length in excess of the distance separating the EUT from the LISN shall be folded back and forth at the center of the lead so as to form a bundle not exceeding 40cm in length. If the EUT is provided with a permanently coiled power cord, bundling of the cord is not

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

required. If the EUT is supplied without a power cord, the EUT shall be connected to the LISN by a power cord of the type specified by the manufacturer which shall not be longer than 1 meter. The excess power cord shall be bundled as described above. If a non-flexible power cord is provided with the EUT, it shall be cut to the length necessary to attach the EUT to the LISN and shall not be bundled.

The interconnecting cables were arranged and moved to get the maximum measurement. Both the line of power cord, hot and neutral, was measured.

The highest emissions were analyzed in details by operating the spectrum analyzer in fixed tuned mode to determine the nature of the emissions and to provide information which could be useful in reducing their amplitude.

Appendix B: Test Procedure for Radiated Emissions

Preliminary Measurements in the Anechoic Chamber

The radiated emissions are initially measured in the anechoic chamber at a measurement distance of 3 meters. Desktop EUT are placed on a wooden stand 0.8 meter in height. The measurement antenna is 3 meters from the EUT. The test setup in anechoic chamber is the same as open site. The turntable rotated 360°C. The antenna height is 1m. The primary objective of the radiated measurements in the anechoic chamber is to identify the frequency spectrum in the absence of the electromagnetic environment existing on the open test site. The frequencies can then be pre-selected on the open test site to obtain the corresponding amplitude. The initial scan is made with the spectrum analyzer in automatic sweep mode. The spectrum peaks are then measured manually to determine the exact frequencies.

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

Measurements on the Open Site or Chamber

The radiated emissions test will then be repeated on the open site or chamber to measure the amplitudes accurately and without the multiple reflections existing in the shielded room. The EUT and support equipments are set up on the turntable. Desktop EUT are set up on a wooden stand 0.8 meter above the ground.

For the initial measurements, the receiving antenna is varied from 1-4 meter height and is changed in the vertical plane from vertical to horizontal polarization at each frequency. Both reading are recorded with the quasi-peak detector with 120 KHz bandwidth. For frequency between 30 MHz and 1000 MHz, the reading is recorded with peak detector or quasi-peak detector.

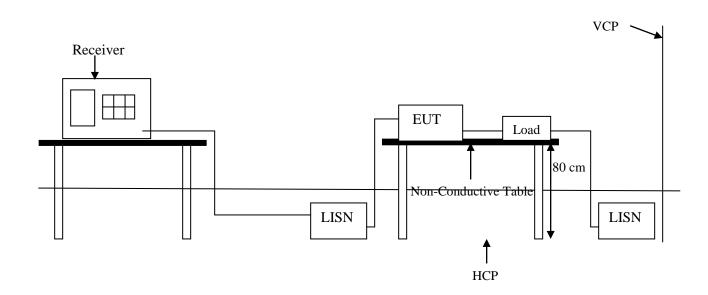

At the highest amplitudes observed, the EUT is rotated in the horizontal plane while changing the antenna polarization in the vertical plane to maximize the reading. The interconnecting cables were arranged and moved to get the maximum measurement. Once the maximum reading is obtained, the antenna elevation and polarization will be varied between specified limits to maximize the readings.

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

3. CONDUCTED EMISSION MEASUREMENT

3.1 TEST SET-UP

3.2 LIMIT

Frequency range	CLAS	SS A	CLASS B		
(MHz)	QP dB(uV)	Average dB(uV)	QP dB(uV)	Average dB(uV)	
0.15-0.5	79 dBuV	66 dBuV	66 - 56 dBuV	56 - 46 dBuV	
0.5-5.0	73 dBuV	60 dBuV	56 dBuV	46 dBuV	
5.0-30.0	73 dBuV	60 dBuV	60 dBuV	50 dBuV	

Remark: In the above table, the tighter limit applies at the band edges.

3.3 TEST PROCEDURE

The EUT and simulators are connected to the main power through a line impedance stabilization network (LISN). It provides a 50 ohm / 50 μH coupling impedance for the measuring equipment. The peripheral devices are also connected to the main power through a LISN that provides a 50 ohm / 50 μH coupling impedance with 50 ohm termination. (Please refer to the block diagram of the test setup and photograph.)

Both sides of AC line are checked for the maximum conducted emission interference. In order to find the maximum emissions, the relating positions of equipment and all of the interference cables must be changed according to EN 55032 regulation: The measurement procedure on conducted emission interference.

The resolution bandwidth of the field strength meter is set at 9 KHz

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

3.4 TEST SPECIFICATION

According to EN 55032 CLASS A

(Please refer to Page 4 for dated references which are related to the standard as mentioned above)

3.5 RESULT: PASSED

EMI Receiver/Spectrum Analyzer Configuration (for the frequencies tested)

Frequency Range:	150 KHz—30 MHz
Detector Function:	Quasi-Peak / Average Mode
Resolution Bandwidth:	9 KHz

3.6 TEST DATA:

Please refer to appendix 2

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

3.7 LIMIT OF CONDUCTED COMMON MODE DISTURBANCE AT TELECOMMUNICATION PORTS:

Frequency Range	Quasi Peak (dBuV)	Average
0.15 ~ 0.5 MHz	94 – 84	84 – 74
0.5 ~ 30 MHz	84	74

The limits decrease linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5MHz for Class A.

Result: **PASS**

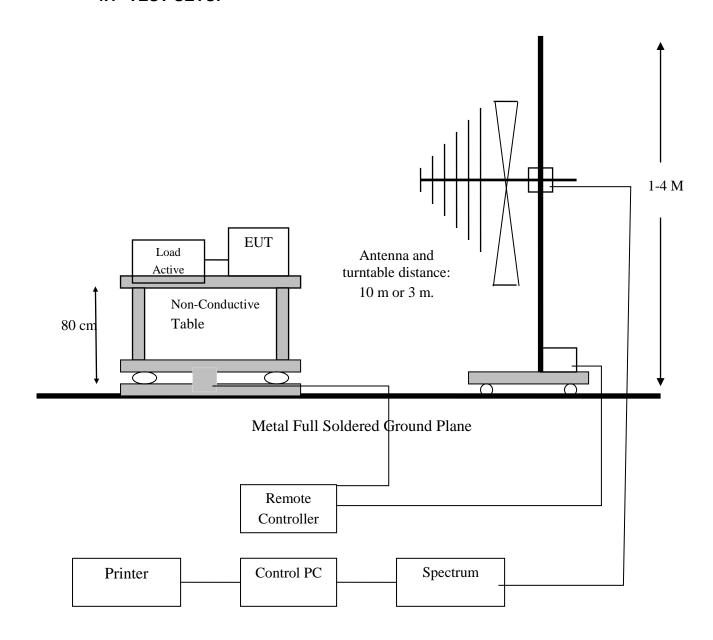

3.8 RESULT OF CONDUCTED COMMON MODE DISTURBANCE AT TELECOMMUNICATION PORTS

Please refer to appendix 2.

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

4. RADIATED EMISSION MEASUREMENT 4.1 TEST SETUP

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

4.2 LIMIT

Frequency	Clas	ss A	Class B		
MHz	Distance Limit (Meter) dBμV/m		Distance (Meter)	Limit dBμV/m	
30 ~ 230	10	40	10	30	
230 ~ 1000	10	47	10	37	

For Class A

Frequency range GHz	Average limit dB(μV/m)	Peak limit dB(μV/m)					
1 to 3	56	76					
3 to 6	60	80					
NOTE The lower limit applies at the transition frequency.							

For Class B

Frequency range	Average limit	Peak limit					
GHz	dB(μV/m)	dB(μV/m)					
1 to 3	50	70					
3 to 6	54	74					
NOTE The lower limit applies at the transition frequency.							

Remark: In the above table, the tighter limit applies at the band edges.

4.3 TEST PROCEDURE

The EUT and its simulators are placed on turn table, non-conductive and wooden table, which is 0.8 meter above ground. The turn table rotates 360 degrees to determine the position of the maximum emission level. For the frequency range is below 1 GHz, the EUT was positioned such that distance from antenna to the EUT is 10 meters. For the frequency range is above 1 GHz, the EUT was positioned such that distance from antenna to the EUT is 3 meters.

For the frequency range is below 1 GHz, the antenna is moved up and down between 1 meter and 4 meters to receive the maximum emission level.

Both horizontal and vertical polarizations of the antenna are set on measurement. In order to find the maximum emission, all of the interference cables must be

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

manipulated according to EN55032 regulation: the test procedure of the radiated emission measurement.

The bandwidth set on the field strength is 120 KHz when the frequency range is below 1GHz. The bandwidth set on the field strength is 1 MHz when the frequency range is above 1GHz.

4.4 TEST SPECIFICATION

According to EN 55032 CLASS A

(Please refer to Page 4 for dated references which are related to the standard as mentioned above)

4.5 RESULT: PASSED

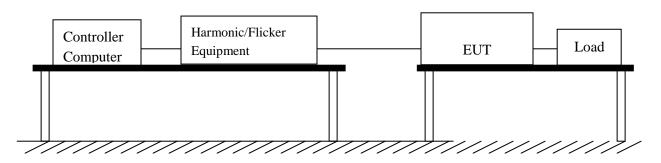

4.6 TEST DATA:

Please refer to appendix 2

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

5. POWER HARMONIC MEASUREMENT 5.1 TEST SETUP

5.2 LIMIT OF HARMONIC CURRENT

Limit of Harmonic Currents

Harmonic Order	Maximum Permissible Harmonic Current (Ampere)	Harmonic Order	Maximum Permissible Harmonic Current (Ampere)	
0	dd Harmonic	Even Harmonic		
3	2.30	2	1.08	
5	1.14	4	0.43	
7	0.77	6	0.30	
9	0.40	8≤ n ≥ 40	0.23 x 8/n	
11	0.33			
13	0.21			
15≤ n (39)	0.15 x 15/n			

5.3 TEST PROCEDURE

The EUT is supplied in series with power analyzer from a power source has the same normal voltage and frequency as the rated supply voltage and the equipment under test. The rated voltage at the supply voltage of EUT of 0.94 time and 1.06 times shall be performed.

5.4 TEST SPECIFICATION

According to EN 61000-3-2

(Please refer to Page 4 for dated references which are related to the standard as mentioned above)

5.5 RESULT: PASSED

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

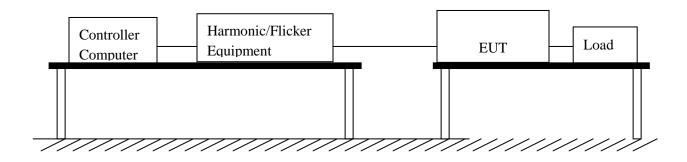

5.6 TEST DATA: PLEASE REFER TO APPENDIX 2

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

6. VOLTAGE FLUCTUATIONS

6.1 TEST SETUP

6.2 VOLTAGE FLUCTUATIONS TEST

Port:	AC mains	
Basic Standard:	EN61000-3-3	
Test Procedure	Refer to paragraph 6.3	
Observation periods	For Pst 10min	
Observation period:	For Plt 2 hours	

6.3 TEST PROCEDURE

The EUT is supplied in series with reference impedance from a power source with the voltage and frequency as the nominal supply voltage and frequency of the EUT.

6.4 TEST SPECIFICATION

According to EN 61000-3-3

According to EN55032 CLASS A

(Please refers to Page 4 for dated references which are related to the standard as mentioned above)

6.5 RESULT: PASSED

6.6 TEST DATA:

Please refer to appendix 2

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

7. ELECTROSTATIC DISCHARGE IMMUNITY TEST (ESD)

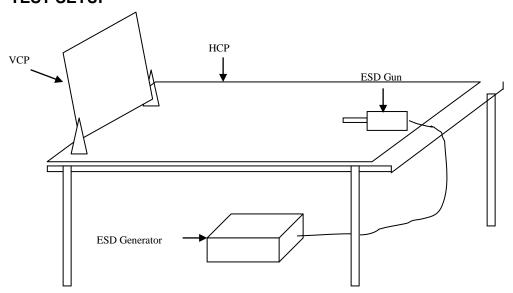

7.1 TEST PROCEDURE

According To IEC 61000-4-2

According To EN 55024

(Please refer to Page 4 for dated references which are related to the standard as mentioned above)

7.2 TEST SETUP

7.3 TEST LEVEL

Item	Test Specification	Unit	Performance Criteria
Enclosure Room	±2, 4, 8 (Air Discharge)	KV	В
Electrostatic Discharge	±2,4 (Contact Discharge)	(Charge Voltage)	Ь
Time between test	<u>1</u>	sec	

Number of test: 10 Discharges / Test point / Polarity / Level

Particular requirements: at least 200 discharges, 100 each at negative and positive polarity, at a minimum of four test points.

When the measurement was taken, The ESD discharger was performed in single discharge. For the single discharge time between successive single discharges will keep on one second. It was at least ten single discharges with positive and negative at the same selected pointed. The selected pointed, which was performed with electrostatic discharge, was marked on the red label on the EUT Indirect applicant of discharge to the EUT

Vertical Coupling Plane (VCP)

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

The coupling plane, of dimensions $0.5 \text{ m} \times 0.5 \text{ m}$, is placed parallel to, and positioned at a distance 0.1 m from, the EUT, with the discharge electrode touching the coupling plane.

The four faces of the EUT will be performed with electrostatic discharge. It was at least ten singles discharges with positive and negative at the same selected point.

Horizontal Coupling Plane (HCP)

The coupling plane is placed under the EUT. The generator shall be positioned vertically at a distance of 0.1m from the EUT, with the discharge electrode touching the coupling.

The four faces of the EUT will be performed with electrostatic discharge. It was at least ten single discharges with positive and negative at the same selected pointed.

7.4 TEST RESULT.

8. RADIATED SUSCEPTIBILITY MEASUREMENT (RS)

8.1 TEST SETUP

8.2 TEST PROCEDURE

According To IEC 61000-4-3

According To EN 55024

(Please refer to Page 4 for dated references which are related to the standard as mentioned above)

8.3 TEST LEVEL

Item	Test Specification	Unit	Performance Criteria
Radio –Frequency	80~1000	MHz	
Electromagnetic Field	3	V/m (unmodulated, rms)	Α
Amplitude Modulated	80	%AM (1 KHz)	

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

8.4 TEST PROCEDURE

The EUT and load, which are placed on a wooden table whose height is 0.8 meter aboveground, are placed with one coincident with the calibration plane such that the distance from antenna to the EUT is 3 meters.

Both horizontal and vertical polarization of the antenna position and four sides of the EUT are set on measurement. In order to judge the EUT performance, a CCD camera is used to monitor the situation of EUT.

All the scanning conditions are as follows:

Condition of Test	Remarks
1. Field Strength	3 V/m; Level 2
2. Radiated Signal	AM 80% modulated with 1 KHz
3. Scanning Frequencies	80 MHz ~ 1000 MHz
4. Dwell Time	3 seconds
5. Frequency step size	1%
6. The rate of swept of frequency	1.5 x 10 ⁻³ decades/s
7. Antenna Polarity	HORIZONTAL & VERTICAL
8. The four sides of EUT are tested	FRONT, REAR, RIGHT, LEFT

8.5 TEST RESULT

Model:AP-FEX-0105-R

Temperature: 22°C , Humidity: 51% RH

ANT	3 V HORIZONTAL	3 V VERTICAL	RESULT
FRONT	А	A	PASSED
REAR	Α	А	PASSED
RIGHT	А	А	PASSED
LEFT	А	A	PASSED

Performance Criteria:

- A) Normal performance within the specification;

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

9. ELECTRICAL FAST TRANSIENT/BURST (EFT) 9.1 TEST SETUP

9.2 TEST PROCEDURE

According To IEC 61000-4-4

According To EN 55024

(Please refer to Page 4 for dated references which are related to the standard as mentioned above)

9.3 TEST PROCEDURE

The EUT and load are placed on a ground reference plane and insulated from it by an insulating support $0.1 \text{ m} \pm 0.01 \text{ m}$ thick. The minimum area of the ground reference plane is $1 \text{ m} \times 1 \text{ m}$. It also projected beyond the EUT by at lease 0.1 meter on all sides.

For Input and Output AC power or DC Input and DC Output Power Ports:

The EUT is connected with the power mains through a coupling device that directly couples the EFT interference signal.

Each of the line and nature conductors is impressed with burst noise for 1 minute.

For Protective Earth Port:

The EUT is connected to the power mains through a coupling device that directly couples the EFT interference signal. The protective earth line (PE) is impressed with burst noise for 1 minute.

The length of power cord between the coupling device and the EUT shall be 0.5 m \pm 0.05 m.

For signal Lines and Control Lines Test:

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

The EFT interference signal is through a coupling clamp device couples to the signal and control lines of the EUT with burst noise for 1 minute.

9.4 TEST LEVEL

Item	Test Specification	Unit	Performance Criteria

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

10.4 TEST PROCEDURE

The EUT and its load are placed on a table which is 0.8 meter height. The length of power cord between the coupling device and the EUT shall be 2 meters or less.

For Input and Output AC Power or DC Input and DC Output Power Ports:

The EUT is connected to the power mains through a coupling device that directly couples the Surge interference signal.

The Surge noise shall be applied synchronized to the voltage phase at 0°, 90°, 180°, 270° and the peak value of the AC voltage wave. (5 Positive and 5 Negative)

Each of line-earth and line-line is impressed with a sequence of five surge voltages with interval of 1 minute.

10.5 TEST RESULT

		150	Source Impedance				

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

11.4 TEST PROCEDURE

The EUT are placed on a table which is 0.8 meter height and a ground reference plane on the table, the EUT are placed upon table and use 10cm insulation between the EUT and ground reference plane.

For AC Input and AC Output Power or DC Input and DC Output Power Ports

The EUT is connected to the power mains through a coupling and decoupling networks for Power supply lines. It also directly couples the disturbance signal into EUT.

Use CDN-M2 for two wires or CDN-M3for three wires.

For Signal Lines and Control Lines Test:

The disturbance signal is through a coupling and decoupling networks (CDN) or EM-clamp which is to couple the signal and control lines of the EUT.

All scanning frequencies conditions are as following:

Condition of Test	Remarks	
IEC 61000-4-6		
1. Field Strength	3 V; Level 2	
2. Radiated Signal	AM 80% modulated with 1 KHz	
3. Scanning Frequencies	0.15 MHz ~ 80 MHz	
4. Dwell Time	3 seconds	
5. Frequency step size Δf	1%	
6. The rate of swept of frequency	1.5 x 10 ⁻³ decades/s

13. VOLTAGE DIPS AND INTERRUPTION MEASUREMENT

13.1 TEST SETUP

13.2 TEST PROCEDURE

According To IEC 61000-4-11

According To EN 55024

(Please refer to Page 4 for dated references which are related to the standard as mentioned above)

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

13.3 TEST LEVEL

Class ^a	Test level and durations for voltage dips							
Class 1	Ca	Case-by-case according to the equipment requirements						
Class 2	0 % during 1/2 cycle	0 % during 1 cycle	70 % during 25/30° cycles					
Class 3	0 % during 1/2 cycle	0 % during 1 cycle	40 % during 10/12 ^c cycles	70 % during 25/30° cycles	80 % during 250/300 ^c cycles			
Class X b	X	Х	X	X	X			

a: Classes as per IEC 61000-2-4.

c: "25/30 cycles" means "25 cycles for 50 Hz test" and "30 cycles for 60 Hz tet".

Class ^a	Test level and durations for short interruptions (t _s) (50Hz / 60Hz)
Class 1	Case-by-case according to the equipment requirements
Class 2	0 % during 250/300 ^c cycles
Class 3	0 % during 250/300 ^c cycles
Class X ^b	X

a: Classes as per IEC 61000-2-4.

13.4 TEST PROCEDURE

The EUT and its load are placed on a wooden table which is 0.8 meter above a metal ground plane which dimension is 1 meter x 1 meter, the thickness is 0.65mm. It projected beyond the EUT by at least 0.1 meter on all sides. The power cord shall be used the shortest power cord as specified by the manufacturer.

For Voltage Dips / Interruption Test:

The EUT is connected to the power mains through a coupling device that directly couples to the Voltage Dips and Interruption Generator.

The EUT shall be tested for 30% voltage dips of supplied voltage and duration time is 10ms, for 60% voltage dips of supplied voltage and duration time is 100ms with a sequence of three voltage dips with intervals of 10 seconds, and for 95% voltage interruption of supplied voltage and the duration time is 5000ms with a sequence of three voltage interruptions with intervals of 10 seconds.

Voltage phase shifting are shall occur at0°, 45°, 90°, 135°, 180°, 225°, 270°, 315° of the voltage.

b: To be defined by product committee. For equipment connected directly or indirectly to the public network, the levels must not be less severe than Class 2.

b: To be defined by product committee. For equipment connected directly or indirectly to the public network, the levels must not be less severe than Class 2.

c: "250/300 cycles" means "250 cycles for 50 Hz test" and "300 cycles for 60 Hz test".

Date of Issue: Dec. 29, 2017 Report No.: E17121511-2

14. PERFORMANCE CRITERIA

- A. The apparatus shall continue to operate as intended during and after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended.
- B. The apparatus shall continue to operate as intended after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is however allowed.
- C. Temporary loss of function is allowed, provided the function is self-recoverable or can be restored by the operation of the controls.
